HIU NETWORKING

Layout 2a: M-Bus Metering & Pre-Pay

Using HIU Control Valve Isolation

One of the most common setup using M-Bus and a GSM Master to send heat meter data via SMS or Email to the Manager.

Heat meters are exposed to a TCP/IP connection on a specified port for access over a LAN or WAN networknetwork.

M-Bus software is required to connect to system, decode the M-Bus data, and present readings.

An internet connection is required if remote reading is required.

Typical Equipment:

The DATA
Twin Plate Hydraulic Interface Unit

Zelcius
M-Bus Heat Meter
with 2x Pulse Inputs

CMex40
M-Bus Relay
with Pulse Input

CMe3000
M-Bus Master
with TCP/IP

CMeX13S
M-Bus Extender
up to 250 nodes
